

2.7. Detailed Regional Analyses

Limitations on space and resources prohibit reporting here of more detailed analyses of data available at the regional level. Appendix 4 contains detailed tables for each of 12 regions of Tennessee showing cumulative AIDS cases by race, sex, age and exposure category for 1982-1995. Readers may request other regional data and cross-tabulations from the STD/HIV Program. Please note, however, that no information will be provided when cross-tabulations produce small enough numbers that the identity of individuals with HIV or AIDS could conceivably be disclosed. It is to ensure privacy and confidentiality that Sullivan County is included here in the Northeast Region tables, while the Southwest Region includes data from Madison County, giving 12, rather than 14, regions.
