

HEALTH ISSUES AND PRIORITIES

Prioritizing Method

The members of the Benton County Health Council through the use of primary and secondary data determined the leading health concerns. This council consisted of representatives of county government, education, health care, the local mental health agency and local citizens groups.

The major task of the council was to identify the top health problems of Benton County in rank order. Using an modified version of the J.J. Hanlon method, the council rated each health problem according to the size of the health problem to reflect the percentage of the local population affected, the seriousness of the health problem, and the effectiveness or impact of intervening in the problem. Once the problems had been rated on size, seriousness and effectiveness of interventions, the PEARL test was applied to determine the Propriety, Economics, Acceptability, Resources available and Legality of intervening.

Prioritized Health Problems

From the council's list of perceived health problems the following health problems were established through the rating and prioritizing process.

PRIORITIZED HEALTH PROBLEMS

- 1. HEART CONDITIONS
HIGH BLOOD PRESSURE**
- 2. CANCER**
- 3. DOMESTIC VIOLENCE**
